

Product Support

BT offers a **minimum period** of product support service as listed in this document for BT branded devices **from the sales start** of the product. Product support includes necessary firmware updates and fixes for critical vulnerability as required. BT constantly monitors the releases of known vulnerabilities. This information is part of our compliance to the Product Security and Telecommunications Infrastructure (PSTI) legislation which came into effect on 29 April 2024.

Search your device's model number in the list below for its specific minimum period of support. The model number can be found printed on the label under your device.

To keep your device up to date and to get the best performance, BT either informs you about the availability of a new firmware version (make sure to update the firmware when it's available), or we will automatically update your device (make sure to keep your device regularly switched-on).
